

Support Teaching and Learning in the Common Core Era

Four years ago, Illinois joined with more than 40 other states to create the Common Core State Standards and prepare students for an ever-changing world. Illinois now must put in place an assessment system that measures whether students achieve at Common Core levels and provides an accurate picture of teaching and learning.

Five ways for Illinois legislators to support the Common Core:

- 1 Support the shift to the new Common Core assessments, and create a feedback process to ensure continuous improvement.** Illinois leaders should adopt an aligned system of Common Core assessments, and then support students, educators and school leaders throughout the transition. This first step cannot be the final one. The state should create an advisory group to gather feedback, drive improvement and ensure new assessments serve the needs of students and teachers.
- 2 Invest in technology to support a 21st century public education and the computer-based assessments that come with it.** School districts need the technology infrastructure to improve instruction and assessment. This likely will require a state investment – soon.
- 3 Address how the state provides resources to improve teaching and learning in all school districts.** How Illinois funds public education is ripe for review. In a state defined by funding disparities from one district to the next, state leaders must consider how to support all school districts with implementing the new standards and assessments.
- 4 Talk with educators about how instruction and assessment are evolving with the Common Core.** Educators know what they need to provide high-quality instruction and assessments.
- 5 Stay the course.** Illinois must see the Common Core through and support students, educators and schools as they take teaching and learning to a higher level. The state also should consider carefully how the new Common Core assessments will be used during this initial transition.
